

CuZn37Pb2

CuZn37Pb2 | C35300

The CuZn37Pb2 alloy offers excellent machinability properties. Furthermore, its high copper content makes it suitable for both cold and hot working processes.

Typical Uses

Watches and watch components, precision mechanical components, and milling plates, key production.

Corrosion Resistance

Machined brass is generally highly resistant to organic substances, as well as neutral or alkaline compounds. However, it is susceptible to stress corrosion cracking, particularly in an ammonia-containing atmosphere and under mechanical stress. Dezincification in warm, acidic waters must also be taken into account.
